Innovative Maths Teaching

Experiences from Macedonian students

What was the most useful thing that we have learned in this first LTTA in Romania?

We learned about the differences between our countries. It was good because we learned new words in a new language, we compared our ideas and we saw that even though we are not from the same country, we have almost the same ideas and conceptions.

What we remember from the visit of Italy?

This is one picture of our visit to Rome. We loved this city and we wanted to stay there more days because its beauties seem endless.

In Italy, we also enjoyed Italian food with rucola, tomato and mozzarella.

We were hosts in October 2019.

As hosts, we tried to introduce you to our customs, tradition and culture. We have shown you the methods and tools we use in teaching mathematics. On this photo we are in Ohrid, where we were walking by the lake. The weather in our country in autumn is wonderful, so we hope that the guests enjoyed their stay in our country.

What we remember from Spain?

Malaga is a wonderful place to be when the weather is sunny. We loved the language, the beaches, the people. Also, the school is very modern and we saw interesting teaching methods. We all agree that we would like to spend some of out next summer holidays here.

Online visit of Turkey

- As a team of Macedonian students, this was our first time to experience such an awesome activity.
- It was great to participate, learn new things, work together and most importantly to have fun.
- We can all agree that the Turkish culture is rich. All those historical places, tradition and food, are just bomb.

Online visit of Turkey

- None of us could resist the food from the pictures in one of the videos.
- Lahmacun with ayran and like a dissert one piece of baklava, for us please! Delicious!
- With full attention, we were listening and watching the virtual tours through the most important attractions in Turkey.

Online visit of Turkey

- For us, the most interesting part was the part when we were finding mathematical jokes.
- One of the best feelings, when studying this subject, is actually to understand math memes!
- Last but not least, even in pandemic conditions, we created incredible memories
- We hope that better times will come soon, so we will all meet in real life!
